

Data Flow from Web Application to Analytics Dashboard

Data Flow from Web Application to Analytics Dashboard

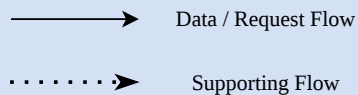

1. USER REQUEST FLOW

2. ANALYTICS DATA FLOW

Legend

Flow Description

1. User Request Flow

User interacts with the web application to request financial data. Data is processed by backend and retrieved from the database.

2. Analytics Data Flow

Raw data from the database is processed through ETL, stored in analytics storage, visualized in Power BI, and used for business insights.
